# 1. Web Based Projects

I have separated my web-based projects into two general groups, websites and web applications.

Websites were mostly done while I was working as a Junior front-end developer on my first ever IT job, which was oriented around making, maintaining and upgrading WordPress based websites. Truth be told, when I look at it now, those websites are not good and they didn't stand the test of time very well. I wish I could re-do some of them because the clients I worked for were top class people.

Bear in mind that some websites were probably re-designed in the meantime or they were shut down completely.

## *Websites*

- [Thalasso Wellness]
- [Thalasso Therapia]
- [Odvjetnik Lovorka Vilenica]
- [Maluba]
- [Pizzeria 4M]
- [Angeluš Mini Pivovara]
- [Charter Providenca]
- [Centrodent Italia]
- [Centrodent Croatia]
- [Blue Cave Tours]
- [Vrsar Charter]
- [Omramoryth]
- [Ivan Fištrek Portfolio]

- [Windmoor]
- [Cooperante]
- [Lodiema]
- [Dusting]
- [Dubrovnik Travel Expert]
- [Štedi Gdje Vrijedi]
- [Mirakul Apartmani]
- [Mirakul Servisi]
- [Akademija Graševine]
- [Villa Toni]
- [Taban]
- [Matej Javorski Portfolio]

Other web-based projects include, but are not limited to, mostly Angular single page application. Some of them are finished products and some of them are works in progress.

## *Web Applications*

- **NASA API**
- **Let's Learn Angular**
- **Hack This Quiz**
- **Google Chrome Extension**
- **College Scheduler**
- **Otklonite Smetnju**
- **Karte Pokrivenosti**

# 2.    Mobile Applications

A year ago, more precisely around April of 2019. I started developing Android applications by using Android Studio and later on Ionic Framework by utilizing its Angular implementation.

Few months later I successfully published and more importantly monetized two fully functioning applications which can be easily downloaded from the Google Play Store. From that point on, I began working on designing and developing, with the help of my friend in need, more android based application which are still works in progress and will see the light of day very soon.

Here is a short but sweet list of all my mobile app projects:

- **Android Music Player**
- **Joke Of The Day**
- **Code IT Lab**

# 3.    Game Development

Recently I started helping my friends, primarily my brother, with game development process. Mostly I offered experience in C# language and its Object Oriented Programming principles and helped with writing clean and maintainable code within Unity Game Engine as well as creating icons and character avatars in Photoshop.

I helped with creating soundtracks as well and got interesting into creating games myself, even though I have not released a single game, most of them are works in progress as well.

Games I have participated on are as follows:

- **Flapping Pooper**
- **Jungle Getaway**
- **Lovecraftian Horror Game (Work in Progress)**
